

EMERALD ASH BORER

A THREAT TO INDIANA ASH TREES

What is it?

- A wood-boring beetle that kills all types of North American ash trees.

When did it get here?

- First detected in the Detroit/Windsor area in 2002.
- Arrived from Asia in wooden shipping material.

What does it do?

- Starves ash trees of nutrients and water by tunneling under bark.

If you see 3 or more of these signs on your ash trees, call:

- 1-866 NO EXOTIC (1-866-663-9684)
